LEGEND

SPECIAL FLOOD HAZARD AREAS INUNDATED BY 100-YEAR FLOOD

ZONE A No Base Flood Elevations determined.

ZONE AE Base Flood Elevations determined.

ZONE AH Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.

ZONE AO Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.

ZONE A99 To be protected from 100-year flood by Federal flood protection system under construction; no Base Flood Elevations determined.

ZONE V Coastal flood with velocity hazard (wave action); Base Flood Elevations determined.

ZONE VE Coastal flood with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

OTHER FLOOD AREAS

ZONE X Areas determined to be outside 500-year flood plain.

ZONE D Areas in which flood hazards are undetermined.

UNDEVELOPED COASTAL BARRIERS

RM 7× Elevation Reference Mark

RM 1 ⊥ River Mile

*National Geodetic Vertical Datum of 1929

NOTES

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The community map repository should be consulted for possible additional flood hazard information.

To obtain more detailed information in areas where Base Flood Elevations and/or floodways have been determined, users are encouraged to consult the Flood Insurance Study and accompanying Flood Insurance Rate Map; users should be aware that BFEs shown on FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information for other purposes.

Flood elevations on this map are based on hydraulic analyses performed in the Flood Insurance Study; these elevations may be different from those published in other studies or shown on other flood maps.

Coastal flood elevations are based on hydraulic analyses performed by the National Weather Service for hurricane storm surge.

Areas of special flood hazard include Zones A, AE, AH, AO, A99, V, and VE.

Coastal areas that are special flood hazard areas may be protected by flood control structures.

Boundaries of the floodways were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program.

Floodway widths in some areas may be too narrow to show to scale. Floodway widths are provided in the Flood Insurance Study Report.

To order the FIS Study, see adjacent, or direct Map Sales

MAP REPOSITORY

City Hall, 212 North Bonner, Tyler, Texas 75710 (Maps available for reference only, not for distribution)
